CONTENTS OF VOLUME 3

Number 1, August 1968

Lloyd D. Fosdick and Harry F. Jordan. Approximation of a Conditional Wiener Integral 1
L. M. Delves. Round-off Errors in Variational Calculations 17
Peter D. Usher. Coordinate Stretching and Interface Location II. A New PL Expansion . 29
Ian H. Sloan. Method for the Numerical Solution of Linear Second-Order Differential Equations 40
F. G. Hagin. Computation of Eigenvalues for Second-Order Differential Equations Using Imbedding Techniques 46
Bruce L. Hicks and Margaret A. Smith. On the Accuracy of Monte Carlo Solutions of the Nonlinear Boltzmann Equation 58
Francis H. Harlow and Anthony A. Amsden. Numerical Calculation of Almost Incompressible Flow. 80
Anthony A. Amsden and Francis H. Harlow. Transport of Turbulence in Numerical Fluid Dynamics 94
W. P. Crowley. A Global Numerical Ocean Model: Part I 111

NOTES

Charles W. Steele. Numerical Computation of Electric and Magnetic Fields in a Uniform Waveguide of Arbitrary Cross Section 148
Leslie C. Higbie and Myron N. Plooster. Variable Pseudoviscosity in One-Dimensional Hyperbolic Difference Schemes 154
B. Bertman. An Algol Program for Calibrating Resistance Thermometers at Low Temperatures 157

Number 2, October 1968

H. Kagiwada, R. Kalaba, and R. Segerblom. Flux Equivalences among Rayleigh, Isotropic, and Other Scattering Models 159
Raymond Gold and Edgar F. Bennett. Error Estimates for Iterative Unfolding 167
Jacob E. Fromm. A Method for Reducing Dispersion in Convective Difference Schemes . . 176
K. Rajaiah and Akella Kameswara Rao. Effect of Boundary Condition Description on Convergence of Solution in a Boundary-Value Problem 190
M. Krell and T. E. O. Ericson. The Bound-State Solution of Wave Equations for Real or Complex Eigenvalues 202
G. Heldmann and P. Schnupp. Computer-Aided Construction of Symmetry Adapted Wave Functions and Matrix Elements 208
Henry F. Schaefer III and Frank E. Harris. Construction and Use of Atomic *L–S* Eigenfunctions 217
E. Faccioli and A. H.-S. Ang. A Discrete Eulerian Model of Spherically Symmetric Compressible Media 226
R. C. Mjolsness and H. M. Ruppel. Multiple Solutions of Hartree–Fock Equations . . . 259
David B. Taylor. The Calculation of Steady Plane Supersonic Gas Flows Containing an Arbitrarily Large Number of Shocks 273
H. C. van de Hulst. Asymptotic Fitting, a Method for Solving Anisotropic Transfer Problems in Thick Layers 291
A. G. Petschek and M. E. Hanson. Difference Equations for Two-Dimensional Elastic Flow 307

NOTES

William A. Lester, Jr. De Vogelaere's Method for the Numerical Integration of Second-Order Differential Equations without Explicit First Derivatives: Application to Coupled Equations Arising from the Schrödinger Equation 322

Shaikh A. Matin. Numerical Iteration of an Elliptic Mixed Boundary-Value Problem in a Region with Curved Boundary 327

J. R. Wayland. A Program to Calculate Particle Spectra Produced in High-Energy Proton–Proton Collisions by the Two-Temperature Statistical Model 331

I. H. Sloan. The Numerical Evaluation of Principal-Value Integrals 332

Edward W. Ng. On the Direct Summation of Series Involving Higher Transcendental Functions 334

Number 3, February 1969

David D. Houghton and Walter Jones. A Numerical Model for Linearized Gravity and Acoustic Waves 339

G. L. Kusic and A. Lavi. Stability of Difference Methods for Initial-Value Type Partial Differential Equations 358

Frederick P. Boynton and Alex Thomson. Numerical Computation of Steady, Supersonic, Two-Dimensional Gas Flow in Natural Coordinates 379

Gordon Kent and Joseph Mautz. The Numerical Solution of a Volterra Integral Equation 399

S. V. Lawande, C. A. Jensen, and H. L. Sahlin. Monte Carlo Integration of the Feynman Propagator in Imaginary Time 416

NOTES

F. Bruce Gerhard, Jr. and L. Lawrence Katz. A Method of Alphabetic Plotting of Undistorted Fourier Maps in X-Ray Crystallography 444

Bhairav D. Joshi and K. L. Kapoor. The Recursive and Analytical Evaluation of Atomic Correlation Integrals 447

K. S. Nagaraja and James P. Hudson. On the Application of Luke's Weight Coefficients for Evaluating the Linearized Rayleigh Problem in a Rarefied Gas Flow 451

Number 4, April 1969

D. H. Bell and L. M. Delves. Discrete Least Squares Method for the Solution of the Schrödinger Equation; Application to the Nuclear Three-Body Problem 453

B. van Leer. Stabilization of Difference Schemes for the Equations of Inviscid Compressible Flow by Artificial Diffusion 473

George A. Baker, Jr. A Certain Unfolding Problem 486

Charles K. Birdsall and Dieter Fuss. Clouds-in-Clouds, Clouds-in-Cells, Physics for Many-Body Plasma Simulation 494

Charles Schwartz. Variational Principles for Integrals 512

A. Brandt and J. Gillis. Asymptotic Approach to Hartmann-Poiseuille Flows 523

NOTES

Marcel Kopp and John H. Mackey. A Versatile Program for Computing Paramagnetic Resonance Spectra from a Parametric Spin-Hamiltonian 539

James J. O'Brien. A Direct Numerical Solution to a One-Dimensional Helmholtz Equation 544

Author Index 547
